

Cabinet Doors & More

REFACING MEASURING GUIDE

UNLIMITED OPTIONS

At Cabinet Doors and More, we offer one of the largest selections of cabinet doors in Western Canada. Most of the product is manufactured at our location so this allows us to offer a custom program of a wide variety of products that can be used to reface you existing cabinets. We manufacture products that can be used as panels that can be used to replace or refinish all exposed ends, fridge gables, bar back panels, and toe kicks. We can offer veneer sheets finished to match the doors where panels are not useable. All doors can be drilled for hinges to match your existing doors, for ease of install. With the drilling we can also offer to replace all the existing hinges with a new soft close hinges.

At Cabinet Doors and More, we also manufacture dovetail drawer boxes that can be used to replace drawers that are broken or needing replacement, or in some instances adding drawers to existing cabinets.

HOW TO GET STARTED

We would always suggest when possible to start with a visit to our showroom to view the options available.

Step 1

- 1) Select a door style: Choose from Melamine Doors, Thermofoil doors, MDF lacquered doors or solid wood doors
- 2) Select a finish: We offer numerous colors of melamine doors, 20 colors of Thermofoil doors, 60 plus options of stains on wood doors and unlimited solid color option of lacquer on wood or MDF

Step 2

- 1) Measure existing doors and panels. We always suggest where possible, to measure the backs of the existing doors & drawer fronts, as there is usually a square edge to get the most accurate measurement. The more accurate the measurements the easier the installation becomes. Measure each doors width, height, and hinge hole locations, from top and bottom of the door to the center of the hinge hole. Also specify if the door opens to the left or to the right.

MEASURE HEIGHT 24 7/16" OR 622MM

MEASURE WIDTH 17 7/8" OR 455MM

MEASURE HINGING 3 7/16 OR 87MM

TOP OF DOOR TO CENTER

BOTTOM OF DOOR TO CENTER

MEASURE PANELS REQUIRED

WIDTH 11 7/8 OR 300MM

HEIGHT 30 7/8 OR 784MM

Step 3

- 1) Determine if any of the existing cabinets need replacing. Now would be the time to determine if the fridge opening is tall enough if you were to replace your fridge? Do you want to add an over the range microwave? Do you want to adjust the upper cabinets to go full height to the ceiling? Do you want to add any drawers to the existing lower cabinets?

Step 4

- 1) Email the sizes along with the door profile and colors chosen when you visited our showroom. Once all the information is received this will allow us to offer a quote on the sizes and products you supplied.

Step 5

- 1) If you are confident that your sizes are accurate we can order off of these dimensions, remembering that the sizes you supplied to Cabinet Doors and More, will be exactly what will be made.
- 2) If you would prefer, for a fee we can send someone to site to measure all the parts to confirm the sizes are correct. Or we can also offer the services of some of our customers to come to site and measure and do the installation, at which point they will take over the entire sale. Cabinet Doors and More does not offer installation of the products we supply, we are strictly a manufacture.
